Dictionaries

\# Dictionaries are ordered collection of Data items. They store multiple items in a single variable. Dictionaries item are **key-value** pairs that are seperated by commas and enclosed with curly brackets ⟶ {}

Example!

$$info = \{ \text{"key"}: \text{"value"} \}$$

$$info = \{ \text{"name"}: \text{"Bappy"} \}$$

$$info = \{ \text{"name"}: \text{"Bappy"}, \text{"age"}: 22 \}$$

key

value

Eng ⟶ Hindi

Login , **SignuP**

$$User\_info = \{ \text{"name"}: \text{"saurab"}, \\ \text{"Email"}: \text{"examp@ ganil-email}, \\ \text{"pass"}: \text{"01801"} \}$$

$$user\_info[\text{"name"}]$$

⟹ saurab
